EE368 Lab 3 - Deployment JSP on your Tomcat Server

Objective & Grading:

Deploy JSP examples on TomCat successfully (2 points), and understand the difference between JSP and Java Servlet (3 points).

A. JSP Deployment (2 points):

Deploy two JSP examples (***first.jsp*** and ***echo.jsp***) on your Tomcat server setup in Lab 1:

1. Please read the info regarding JSP (a.k.a. Java inside HTML) from the following URL:
   https://www3.ntu.edu.sg/home/ehchua/programming/java/JSPByExample.html

2. You could copy the JSP source codes from this website, and then save them as ***first.jsp*** and ***echo.jsp***.

3. Create a new folder named *hello* under *C:\Program Files\Apache Software Foundation\Tomcat 6.0\webapps*

4. Copy first.jsp and echo.jsp into this folder for the JSP deployment.

5. Check your JSP examples by: http://localhost:8080/hello/first.jsp and http://localhost:8080/hello/echo.jsp , and copy the screen prints into the report to prove your successful deployment. Please make sure your TomCat service has been started before your testing.

B. Understand the difference between Java Servelet and JSP (3 points):

Please read the info for Java Servelet on this webpage https://www3.ntu.edu.sg/home/ehchua/programming/java/JavaServlets.html, and JSP on this website https://www3.ntu.edu.sg/home/ehchua/programming/java/JSPByExample.html carefully, and then summarize 3 major differences between Java Servelet and JSP in your report by considering your experience in lab 1 and lab 2.
